

Sweden, November 16th 2012.

I am Henrik JENNEFORS, CEO and Optometrist of the Ögonlasern Group of Clinics in Sweden (<http://www.ogonlasern.se>). I am hyperopic and have presbyopia. I have never been able to read a book without spectacles and for a few years I have not been able to use my mobile phone or work at my computer without spectacles anymore.

I attended last September during the European Society of Cataract and Refractive Surgery (ESCRS), I attended a symposium on a promising concept, a trifocal diffractive IOL called FineVision. I listened to Dr. Erik MERTENS from Medipolis Clinic in Antwerp Belgium (<http://www.medipolis.be>), well-known refractive surgeon in Europe. He convinced me to undergo a refractive lens exchange (RLE) and to get bilateral implantation of that unique trifocal diffractive intraocular lens (IOL) FineVision.

On October 16th 2012, I was operated by Dr. Anders GRANBERG at the Norrköping Clinic, one of the 8 refractive Centers belonging to the Ögonlasern group. The same day after the surgeries I was able to look at my watch and tell the time to my colleague, I was able to use my iPhone and call my wife to tell her about my new sight and I was of course still able to see well at far vision, even better than before.

Since then and after having visited the manufacturing site of the creator of the innovative concept of the FineVision trifocal IOL (PhysIOL – www.physiol.eu), my colleagues and I have decided to propose that unique concept to our patients all around Sweden. I am personally travelling in my country to explain to the patients my new life without spectacles.

Mr. Henrik JENNEFORS

CEO of Ögonlasern and Optometrist
